### **Scheduled Water Valve Repair and Lane Closures At Kemp and Midwestern Parkway**

Wichita Falls, Texas – The City of Wichita Falls Water Distribution Division will be conducting a scheduled repair to a large water valve at the southeast corner of Kemp Boulevard and the Midwestern Parkway intersection beginning Tuesday afternoon on September 14, 2021.

The scheduled repair requires the closures of the two eastbound lanes of Midwestern Parkway, the turning lane going northbound on Kemp onto eastbound Midwestern Parkway. The eastbound lanes of Callfield and the turning left lane going southbound on Kemp. Motorists will be detoured around the excavation area to protect workers. Motorists are advised to take the road closure/detour into consideration when traveling in the area.

Water Distribution will conduct a water shutoff after 11:00PM on Tuesday, September 14, to avoid adversely affecting businesses in the area. Businesses will be notified of the service disruption today, September 13, 2021. If service interruption is warranted to continue past 8:00AM, it will affect customers in the Callfield/Kemp/Midwestern business corridor.

There is no current estimated time for how long the water valve and street repair will take.

For information or questions, please contact the Water Distribution Division at (940) 761-4333.
